## Experiment A: Cost Analysis Table

Suppose a laboratory at an agency carries out ten experiments. The lab takes up about $1 / 4$ of the space. Experiment A uses three items: experiment board, gasket, and quartz tube. It uses a dedicated instrument and computer equipment that the agency purchased. Experiment A uses $10 \%$ of the lab space. It is estimated to be able to carry out Experiment A 300 times a year.

| Total Cost |  |  |  | 6,955.4 |
| :---: | :---: | :---: | :---: | :---: |
| Item | Unit | Quanti <br> ty | Unit Price | Amount |
| 1, Direct Cost |  |  |  | 6,736.6 |
| 1. Labor Total |  |  |  | 986.6 |
| (1)Staff | hour | 3.0 | 242.0 | 726.0 |
| (2)Chief | hour | 0.2 | 327.0 | 65. |
| (3)Section Head | hour | 0.1 | 440.0 | 44.0 |
| (4)Chief of Staff | hour | 0.1 | 440.0 | 44.0 |
| (5)Deputy Director | hour | 0.1 | 517.0 | 51.2 |
| (6)Director | hour | 0.1 | 555.0 | 55.5 |
|  |  |  |  |  |
| 2. Materials Total |  |  |  | 4,100.0 |
| (1)Consumables |  |  |  |  |
